Let's get to know some facts and myths about lightning, considering it's that time of the year, folks!

■ Myth: Lightning never strikes the same place twice.

■ Fact: Lightning often strikes the same place repeatedly, especially if it's a tall, pointy, isolated object. The Empire State Building is actually hit nearly 100 times a year!

■ Myth: If it's not raining or there aren't clouds overhead, you're safe from lightning.

■ Fact: Lightning often strikes more than three miles from the center of a thunderstorm, far outside of the rain or thunderstorm cloud. "Bolts from the blue" can strike 10-15 miles from the thunderstorm.

**Isn't that impressive?**

## **Therap Hint** **IPOPs**

Keep on the look out for new "To Dos" called IPOPs. The term IPOP stands for Individual Plan of Protective Oversight.

These are, in a nut shell, a quick "get to know me" about each

person. Every time you see an IPOP show up, please take the time to review the information so that you know and understand each individual's needs.

## **Therap Hint** **Finding IPCs**

On the left side of Therap, you'll notice a fancy button called "Individual Home Page." Click on this button and type in the name of the individual you are looking for. Once their profile shows up, you can select the "Plans" button beneath their name and scroll down to find a direct link to that individual's Plan of Care! Yes, it's just that easy!
